

Ideation Phase

Brainstorm & Idea Prioritization

Date	20 July 2026
Team ID	
Project Name	Plugging Into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	4 Marks

Step 1: Team Gathering & Problem Statement Selection

The team reviewed the problem statements above and selected PS-1 as the primary focus: making scattered, hard-to-interpret electricity consumption data understandable and accessible through a structured pipeline and web-based dashboard.

Step 2: Brainstorm, Idea Listing and Grouping

- Centralize and clean the raw dataset in a relational database (Microsoft SQL Server).
- Write SQL queries to aggregate consumption by state, region, and time period.
- Build interactive dashboards to visually compare consumption trends (Tableau).
- Develop a lightweight web application to present the dashboards/insights (Flask).
- Keep each stage (data, visualization, web) modular so it can be updated independently.

Step 3: Idea Prioritization

Idea	Priority
SQL Server data cleaning & pre-processing	High
Aggregation queries (state / region / time)	High
Tableau interactive dashboards	High
Flask web application to host insights	Medium
Modular, independently-updatable pipeline stages	Medium
